

QuotaSprint — Brand Identity

Working name. Domains (.com / .com.au / .au / .io / .ai) confirmed available. Run an IP Australia trademark knock-out search before committing brand spend.

1. The name, decoded

QuotaSprint fuses the two ideas the whole product stands on:

- **Quota** — the number, the goal, the lag result every seller is measured on. Instantly says "sales."
- **Sprint** — short, focused bursts of disciplined effort (the agile metaphor your buyers already know). It's the *lead* behaviour that earns the lag.

Together the name carries the core promise in one word: **hit the quota by winning the sprint**. Nail the leads, earn the lags.

This is white space. The quota-software category (Varicent, Everstage, Qobra) is descriptively named and outcome-obsessed; none own the *behaviour* — the sprint, the rhythm, the weekly act of focus. QuotaSprint plants its flag there.

2. Mission, vision, purpose

Mission — *Help every seller win the week, so they win the number.*

Give B2B reps a weekly operating system that turns chaos into focus, exposes pipeline that isn't real, and tells them the next move that matters — with a coach in their corner when they're stuck.

Vision — A world where sales performance is built on controllable weekly behaviour and genuine buyer pull, not quarter-end heroics and pipeline theatre.

Why we exist — Sellers are judged on lagging numbers but lose deals in the leading behaviours: the weeks where the right activity, on the right accounts, at the right stage, simply doesn't happen. Most training is generic; most managers are stretched; most CRMs record the past instead of guiding the next move. QuotaSprint closes that gap.

3. Brand promise & positioning

For new-business sellers in complex, multi-step B2B — under-coached and under pressure —
QuotaSprint is a weekly focus coach that filters for real pipeline, kills deal rot, and keeps reps accountable to the lead measures that drive the number,
unlike one-off training (no weekly structure), a CRM (records the past), or a stretched manager (inconsistent, time-poor),
because we install a personal rhythm — and give leaders a simple cockpit to see who needs help.

One-liner: *A weekly focus coach for B2B sellers — short sprints, real pipeline.*

4. Brand values (what we stand for)

1. **Pull over push.** People buy from people — heart first, then head. We chase deals where the buyer is pulling, and call out the ones the rep is pushing.
2. **Real over wishful.** Fewer, truer deals beat an inflated forecast. We'd rather kill a fake deal early than nurse it for a quarter.
3. **Leads earn lags.** Control the controllables. We coach the weekly behaviour, not the month-end scoreboard.
4. **Meet them where they are.** No generic, one-size-fits-all training. The system adapts to the rep's product, market, and live deals.
5. **Progress, not punishment.** Accountability with psychological safety. We surface wins and momentum, not scolding.

5. Brand personality

QuotaSprint is the **sharp, been-there sales coach** — not a vendor, not a guru.

Trait	We are	We are not
Tone	Direct, plain-spoken, a little blunt	Corporate, hedgy, jargon-heavy
Energy	Focused, momentum-driven	Hype-y, exclamation-mark salesy
Stance	Honest, in-your-corner	Preachy or judgmental
Smarts	Practical and earned	Academic or theoretical
Style	Clean, confident, modern	Cluttered, "dashboard noise"

If QuotaSprint were a person: the sales leader you actually wanted — who tells you the truth about your pipeline, helps you plan a winnable week, and celebrates the right behaviour.

6. Voice & messaging

How we sound: short sentences, active verbs, concrete numbers. We talk about the rep's real week, not abstractions. We use the sprint metaphor consistently (set the sprint → work the leads → spot the rot → run the retro).

Words we love: sprint, rhythm, focus, real pipeline, pull, lead measures, next move, win the week, deal rot, controllables.

Words we avoid: "velocity" (Salesforce HVS + agile clash), "cadence" (Salesloft), "synergy," "leverage" (as a verb), anything echoing "SalesSprint" (existing brands).

Tagline system:

- **Primary:** Short sprints. Real pipeline.
- **Behavioural:** Sprint the leads. Earn the lags.
- **Outcome:** Win the week. Hit the number.

Boilerplate (≈50 words):

QuotaSprint is a weekly focus coach for B2B sellers. It turns a messy pipeline into a short, sharp weekly sprint on the few actions that actually win deals — filtering for real buyer pull, flagging deal rot, and telling reps what move to make next, with tailored coaching when they need it.

7. Logo system

The mark is a rising "sprint" stroke that climbs through milestone nodes and breaks past a dotted **quota line** — momentum, rhythm, and beating the number, in one shape. It lives in a rounded-square "app tile" so it doubles as an icon/favicon.

- **Primary lockup** — mark + wordmark, horizontal. The default everywhere there's room.
- **Mark only** — the app tile, for favicons, social avatars, app icons. Legible down to 32px.
- **Reversed** — for dark backgrounds (uses the lighter orange and a hairline tile border).
- **Wordmark** — "Quota" in ink, "Sprint" in orange — the colour split reinforces lead (sprint) earning lag (quota).

Rules of use:

- Clear space = the height of the tile's corner radius on all sides.
- Never recolour the stroke to anything but the brand orange (or its dark-mode variant).
- Never stretch, add gradients/shadows to the mark, or place the standard logo on a busy photo — use the reversed version on a solid dark panel.
- Minimum sizes: primary lockup ≥ 120px wide; mark ≥ 24px.

Files: brand/logo.svg (primary), brand/logo-mark.svg (icon), brand/logo-reversed.svg (dark bg).

8. Colour palette

A focused two-colour system: a confident dark **Ink** for trust and seriousness, an energetic **Sprint Orange** for momentum and the call to act. A cool **teal** plays support for "pull / healthy / on-track" signals; warm amber flags rot.

Role	Name	Light	Dark mode
Brand ink / surfaces text	Ink Navy	#0F1B2D	#0B1320 (bg)
Primary accent / CTA	Sprint Orange	#FF6A26	#FF7A3D
Primary hover	Sprint Orange Deep	#E85912	#FF924F
Support / "pull" signal	Pull Teal	#1F8A8F	#4CC0C4
Healthy / on-track	Signal Green	#2F9E6E	#46C08A
Deal-rot / warning	Rot Amber	#C0612A	#E08A4F
Page background	Mist	#F6F7F9	#0B1320
Body text muted	Slate	#566173	#9AA8BD

Usage discipline: orange is for action only (CTAs, the sprint stroke, key highlights) — never large fills. Ink and neutrals do the heavy lifting; one accent keeps the brand sharp, not noisy. Green/teal/amber are *signal* colours reserved for pull/rot status, not decoration.

9. Typography

Use	Typeface	Why
Display / headlines	Clash Display (700)	Confident, modern, slightly geometric — energy without gimmick.
Body / UI	Satoshi (400/500/700)	Clean, highly legible, neutral-but-warm. Pairs cleanly with Clash.
Fallback stack	Helvetica Neue / system sans	Safety net if web fonts fail.

Both are free via Fontshare. Rules: weight contrast over size contrast, tight letter-spacing on display (-0.02em), generous line height on body (1.6), 3–4 sizes per layout max.

10. Look & feel

- **Feel:** momentum + calm control. A clean "operating system," never a cluttered dashboard.
- **Layout:** generous whitespace, grid-aligned, one clear focal action per screen.
- **Motion:** purposeful and subtle — gentle reveals, smooth state transitions. Nothing bouncy or attention-seeking.
- **Imagery:** product-led (the weekly sprint, the plan, the signals) over stock photography. If people appear, they're real sellers mid-work, not stock smiles.
- **Iconography:** simple line icons, 2px stroke, rounded caps — same family as the logo stroke.

Sources: brand strategy and product philosophy developed across the user's prior QuotaSprint / Sales Sprint working sessions. 11. From brand to buildable product

The brand only matters if the product exists. Here's how QuotaSprint becomes real, and how the identity shows up in the actual tool.

It is buildable today, cheaply. The product is one loop — *forms* → *AI interpretation* → *knowledge library* → *weekly plan* — and every layer is off-the-shelf in 2026 (Next.js + Supabase + a cheap LLM API + Stripe). See the **Build Blueprint** for the full architecture, three build paths, and the 90-day sequence.

Running costs are tiny. AI work costs ~AUD\$0.42 per active user/month; fixed infrastructure ~AUD\$73/month. That means ~94% gross margin on a AUD\$39 Solo plan and **break-even** at ~2 paying users. The moat isn't the code — it's the coaching IP loaded into the knowledge library.

The identity in the interface. The mock screens make the brand tangible: Ink Navy chrome with Sprint Orange reserved strictly for action (the CTA, the sprint stroke, the live progress ring); Clash Display headlines over Satoshi body; signal colours (teal = pull, green = healthy, amber = rot) doing exactly the job the palette defines. The voice — direct, in-your-corner — shows up verbatim in the "Coach's read" panels ("If they won't commit, it isn't real pipeline — and that's a win, not a loss.").

Mock screens (see QuotaSprint_Mockups.pdf / PNGs):

1. **Weekly Sprint dashboard** — the rep's home: real-pipeline KPIs, three lead measures, completion ring, next-move coaching.
2. **Weekly intake** — the 4-minute ritual that replaces CRM admin; pull-vs-push and compelling-event capture built in.
3. **Deals & signals** — every deal scored for buyer pull and deal rot; "real pipeline vs theatre."
4. **Sprint plan + manager email** — the generated plan and the one-tap manager-ready summary.
5. **Leader Cockpit (Team / Door 2)** — behavioural view of the team; who needs coaching before the number slips.

These are design mocks, not the live app — but they map 1:1 to the architecture in the Build Blueprint, so nothing shown here is hand-wavy.
