

QUOTASUCCESS

Website Design & Build Brief

Find what's stopping growth. Then set the pace.

A lead-generating marketing site and diagnostic front door for QuotaSuccess. Senior go-to-market help for ANZ B2B companies that can't yet justify a full-time GTM executive.

Field	Detail
Project	QuotaSuccess marketing website + PACE Diagnostic lead magnet
Prepared	August 2026
Owner	Robbie Casley, Founder & Principal
Status	Design brief for build. Supersedes the placeholder site
Region	Australia / ANZ first, positioned for global remote

1. Purpose & objectives

The website has one job: turn a stalled-growth suspicion into a booked PACE Diagnostic. It is both a credibility layer for a senior operator and a working lead magnet that gauges real market interest before heavy investment in brand and outbound.

PRIMARY GOAL

Convert the right visitor into a **booked diagnostic call or a completed self-assessment lead**. This is the low-risk front door to the whole offering ladder.

SECONDARY GOALS

- Gauge demand: measure which symptoms and services draw the most interest, so the offering can be tuned to the market.
- Establish authority: make one senior operator look more credible than a franchise network or a slide-only strategy firm.
- Capture a pipeline of warm leads (email + context) even from visitors who are not ready to book.
- Seed the PACE method as ownable IP that buyers begin to recognise.

WHAT SUCCESS LOOKS LIKE (FIRST 90 DAYS)

Metric	Target signal	Why it matters
Lead conversion rate	2–5% of visitors submit an email or booking	Proves the offer and message resonate
Self-assessment completions	Completed PACE mini-diagnostics	Highest-intent lead; shows the method lands
Booked diagnostics	First paid PACE Diagnostics from the site	The commercial proof point
Symptom heatmap	Which symptoms/services get the most clicks	Direct market feedback on positioning

Note: these are directional signals for a founder-led launch, not enterprise KPIs. The point is fast market feedback, not vanity traffic.

2. Audience & the hero

The visitor is the hero, not QuotaSuccess. Every section should make the CEO, the senior sales leader, or the rep feel understood and more capable, never talk about our cleverness. We diagnose and equip; they win.

Primary audiences

Who	Stage / context	What they need from the site
Founder / CEO	Seed–Series A, still the best closer and the bottleneck	Reassurance that growth can be systemised without a A\$275k hire
VP Sales / CRO	Team of 2–8 reps, system hasn't caught up	Diagnosis, RevOps and enablement without adding headcount
VC / PE operator	Portfolio needs a trusted GTM hand	Confidence this scales across companies

The emotional truth to speak to

- Sales leaders have no time to coach. Their heads are stuck in lag reports and deal escalations.
- It is harder than ever to get enough buyer time to run a complex sales process, so deals stall in the middle.
- Growth depends on heroes, not a repeatable play; if a hero leaves, the pipeline leaves too.
- A full-time senior GTM leader is unaffordable, so the problem gets deferred and growth stalls at the founder's ceiling.

3. Brand & visual identity

The site must carry the existing QuotaSuccess look and feel and read as the same brand family as **QuotaSprint**: shared palette and type, with a slightly deeper, more senior navy for the parent house.

3.1 Colour palette

Role	Name	Hex	Usage
Primary dark	Ink Navy	#0C1A2E	Hero, header, footer, dark sections
Dark alt	Ink 2	#11243A	Cards on dark, stat strip
Accent	Sprint Orange	#FF6A26	CTAs, highlights, the “em” word in headlines
Accent soft	Ember Soft	#FF8351	Hover, stat figures on dark
Support	Teal	#1F8A8F	PACE “Position”, secondary tags
Support	Green	#2F9E6E	PACE “Expand”, success/positive bars
Support	Amber	#C0612A	PACE “the block” / low score
Surface	Paper	#F7F8FA	Page background
Surface	Mist	#EDEFF3	Alternating section background

Rule: one accent does the persuading. Sprint Orange is reserved for actions and single highlighted words. Teal / green / amber appear only inside the PACE scorecard where they encode meaning, never as decoration.

3.2 Typography

Level	Typeface	Treatment
Display / headlines	Clash Display (600–700)	Tight leading, one word in Sprint Orange for emphasis
Body / UI	Satoshi (400–700)	16–18px body, generous line height (1.5–1.6)
Fallback stack	system-ui, sans-serif	If Fontshare fails to load

Load both from **Fontshare**. Keep to two typefaces and 2–3 weights. Word-spacing on hero headlines needs a small positive nudge so large Clash Display words never appear to merge.

3.3 Logo & marks

- Primary lockup: the rising line-and-node mark (ascending chart line with an orange end node) plus the QuotaSuccess wordmark.
- The mark works in reverse (white/orange on Ink Navy) for the header and footer.
- A QuotaSprint chip appears only in the product tie-in section, never competing with the house logo.

3.4 Voice & copy standards

Non-negotiable copy rules

No em dashes. No buzzwords or jargon. No templated openers. Australian spelling throughout (“optimise”, “behaviour”, “programme” → “program” per AU business norm).

Plain, confident, human. Short sentences. Speak to the reader as “you”. Make them the hero.

4. Site structure & page map

Launch as a single long-scroll landing page with anchor navigation (fastest to ship, best for a focused lead magnet), with a clear path to add standalone pages as content grows.

Launch scope (v1, one page, anchored sections)

#	Section	Job of the section
1	Header (sticky)	Logo, anchor nav, persistent “Book a diagnostic” button
2	Hero	The promise + the PACE scorecard visual + primary CTA
3	Proof strip	4 credibility stats (cost saving, speed, ANZ funding, ARR band)
4	Symptoms	“Does this sound like you?” The door-opener checklist
5	The problem	Name the real problem: the constraint has a name once you look
6	The PACE method	Position · Acquire · Convert · Expand explained simply
7	Self-assessment	The lead magnet: interactive mini PACE diagnostic
8	Services	Diagnostic + 4 service lines, diagnose/build/run/teach
9	How it works	Land → Expand → Embed → Compound ladder
10	Who we help	Founders, VP Sales/CRO, VC/PE operators
11	QuotaSprint	Product tie-in: how the rhythm sticks after the engagement
12	About / operator	The single senior operator story. Credibility, not a CV dump
13	Lead-capture CTA	Book a diagnostic / leave email; the conversion moment
14	Footer	Nav, contact, placeholder/trade-mark note, copyright

Phase 2 (add as content matures)

- Dedicated pages per service line (Fractional, Engineering, Training, Frameworks) for SEO/AEO depth.
- Insights / POV hub: the PACE content engine (articles, mini-diagnostics) that sells the seniority.
- Case studies once the first 2–3 pilot clients generate results.

5. Section-by-section specification

5.1 Hero

- **Headline:** “Find what’s stopping growth. Then set the pace.” (last phrase in Sprint Orange).
- **Sub-line:** “Senior GTM leadership for companies that can’t yet justify a full-time executive. One operator. One method. Real revenue movement.”
- **Primary CTA:** “Book a PACE Diagnostic”. Secondary: “See how it works” (scrolls to method).
- **Visual:** the PACE scorecard card (Position/Acquire/Convert/Expand bars) with one low amber bar labelled “the block”, which shows the product of the diagnostic at a glance.

5.2 Symptoms: the door-opener

A scannable checklist headed “Does this sound like you?” Visitors self-identify; each symptom quietly maps to a PACE domain. This is the emotional hook that earns the rest of the page.

- Group into: growth & predictability, differentiation, the engine & handoffs, leadership & time, the back half (retention/expansion).
- Reframed in QuotaSuccess voice. Do not reproduce any third-party framework’s proprietary wording.
- Optional: make each symptom clickable to log interest (demand signal) and scroll to the relevant method/service.

5.3 The PACE method

Four simple cards, one per PACE domain (Position, Acquire, Convert, Expand), each a one-line plain-English question (e.g. Position: “Are you aimed at the right buyers with a position they actually feel?”). Keep it a teaser; the full framework is the paid diagnostic.

5.4 Self-assessment: the lead magnet

The core lead magnet

An interactive mini PACE diagnostic: ~12–16 questions (3–4 per domain) scored on a simple maturity scale. Returns an instant PACE scorecard + which domain is likely “the block”.

The full personalised readout is emailed, which is the lead capture. High intent, and it makes the method tangible before anyone pays.

- **Data captured:** email, company, role, self-scored PACE result, and the self-identified “block”. Rich context for a warm follow-up.
- **Build note:** can ship first as a lightweight client-side scorer that emails the result; upgrade later to a stored, gated PDF readout.
- **Ethic:** give real value in the free version. The score should be genuinely useful even if they never buy. That is what earns trust and referrals.

5.5 Services

Show the PACE Diagnostic as the highlighted “start here” card, then the four lines as diagnose / build / run / teach: QuotaSuccess Fractional, Engineering, Training, Frameworks. Lead with the outcome, keep price ranges as “from A\$...” to qualify without scaring off.

5.6 QuotaSprint tie-in

One section framing QuotaSprint as the weekly operating layer that keeps the rhythm going after the engagement ends. Same family, same colours, clearly a product inside the house, not a competing brand.

5.7 About / the operator

A short, confident operator story: why one senior hand who can diagnose, build, coach and lead beats a franchise network or a slides-only firm. Credibility and specificity, not a résumé. Include a real photo when available.

5.8 Lead-capture CTA

- **Primary:** “Book a PACE Diagnostic”, linking to a scheduling tool (e.g. Calendly / Cal.com).
- **Secondary:** email capture for those not ready to book, with a clear promise of what they get back.
- **Reassurance line:** fixed price, 2–3 weeks, a clear plan whether or not they continue.

6. Lead-generation engine

The site is a lead magnet first. Three capture mechanisms, ranked by intent:

Mechanism	Intent	What we capture	Follow-up
Book a diagnostic	Highest	Scheduled call + context	Direct to scope conversation
PACE self-assessment	High	Email + role + PACE result + “block”	Emailed readout, then tailored outreach
Newsletter / POV signup	Nurture	Email	PACE content drip until ready

Instrumentation (so the site actually gauges interest)

- Analytics on every CTA, symptom click, and assessment completion (privacy-respecting, e.g. Plausible or GA4).
- Event tracking on which symptoms and services draw the most attention. This is the market-feedback loop.
- All leads flow to one place (CRM or a simple sheet at launch) with the captured context attached.
- Wire the currently client-side form to a real endpoint (Formspree, a serverless function, or a CRM form) before launch.

7. Technical requirements

Area	Requirement
Build	Static HTML/CSS/JS to start (fast, cheap, portable); can move to a framework in Phase 2
Hosting	Preview via internal deploy; publish to a pplx.app link or custom domain when name is locked
Performance	Sub-2s first load; lazy-load images; system-font fallback if Fontshare is slow
Responsive	Mobile-first; test at 375px and 1280px+; single-column stack on small screens
Accessibility	WCAG AA contrast; keyboard navigable; alt text; visible focus states
SEO / AEO	Semantic headings, meta + Open Graph tags, descriptive titles, fast Core Web Vitals
Analytics	Privacy-friendly analytics + event tracking on CTAs and assessment
Forms	Real submission endpoint + scheduling integration; confirmation state on submit
Language	en-AU throughout

8. Deliverables & phasing

Phase 1: launch (validate demand)

1. Single-page site with all v1 sections, on-brand, fully responsive.
2. Working PACE self-assessment with emailed result (the lead magnet).
3. Live lead capture + scheduling + analytics wired end to end.
4. Placeholder / trade-mark note until the name is cleared.

Phase 2: grow (after first signal)

5. Per-service-line pages and an Insights / POV hub for SEO/AEO.
6. Gated PDF readout and a stored assessment history.
7. Case studies from the first pilot clients.

Open items to confirm before build

- Domain + trade mark cleared for QuotaSuccess and “PACE Diagnostic” (IP Australia classes 35 & 41, ASIC, domain).
- Scheduling tool and form/CRM endpoint chosen.
- Operator photo and any early proof points / logos available to use.
- Final price ranges confirmed for public display (or kept as “from” anchors).
- Reconcile “eight-pillar” language with the four-domain + handoffs structure so all assets agree.
